How does a child’s **PLAY** impact their future image of themselves?

**What is the project about?**

We are currently studying the relationship between children’s play and their ideas about their future selves. During this study...

- Your child will be asked complete certain activities and then will be asked a series of questions
- Activities may include puzzles, play sets, dolls, blocks, and books
- We’ll ask you to bring your child to our lab located at Washington & Lee University (see picture above)
- The activities are designed for children **4 to 6 years old**
- The activities will take less than an hour to complete
- Your child will be filmed during the study for later review
- You are welcome to watch while your child participates!

**How does it work?**

You and your child will be greeted at Washington & Lee University and taken to the Developmental Lab area. Your child will complete a set of activities and will receive a thank you gift for participating. Parents will be entered into a raffle to win a **$40 Amazon gift card**.
